July 15	12:30-3:30	Silverdale Community Center	9721 Silverdale Way NW

Nearshore Restoration Planning

The PSNERP General Investigation has recently published a range of technical documents and is rapidly proceeding on a sound-wide change analysis and strategic needs assessment.

2008 ESRP Request for Proposals

We will be requesting competitive proposals for projects that protect and restoration the Puget Sound Nearshore ecosystem in August, and will provide an overview of that process

Adaptive Management Objectives

ESRP and the Nearshore Partnership will continue to make strategic investments in project-based stewardship and learning. We will be asking the practitioner community to contribute ideas for specific technical products that would increase the effectiveness and efficiency of their work.

Technical Peer Reviewers

The review and ranking of projects is a community activity, and we will be collecting recommendations for individuals who would like to share in evaluation of projects.
